Glide into Siglufjörður, walk across the Arctic Circle on Grímsey Island, touch ice fragments calved from Breiðamerkurjökull glacier, and stand in the mist of thundering Goðafoss waterfall. Uncover remarkable history on Heimaey Island, where houses hemmed by hardened lava flow from Eldfell volcano are clustered beneath towering cliffs populated by multitudes of birds. FELICITY ASTON MBE

There is an anecdote on Felicity Aston MBE's website that talks about her first "expedition" at the age of nine, which involved "being bribed" up a modest peak in England by her parents. Aston, now one of the most accomplished polar explorers and climate scientists of modern times, says this childhood milestone changed her life. Today, she is both the only woman in the world to have skied across Antarctica alone and the first person in the world to have traversed the continent purely by muscle power, which gave her a place in the Guinness World Records. Her polar career began two decades ago when she traveled to Antarctica as a meteorologist with the British Antarctic Survey. By age 23, she was monitoring climate change at the Rothera Research Station on the Antarctic Peninsula. Her Kaspersky Lab Commonwealth Antarctic Expedition was the first to "Tweet to the Pole" and material from her Pole of Cold expedition has been developed into a traveling art exhibition. Aston has since written five books and produces articles for publications in the U.K. and abroad. She is also owner of Iceland's beautiful Vigur Island, where she lives with her family.

Vigur Island, Iceland

LAND OF FIRE AND ICE

Lava formations at Dimmuborgir

A land of unparalleled geological riches, Iceland is home to 4,500 square miles of glaciers, 30 active volcanic systems, 800 hot springs, and over 10,000 waterfalls. Born of the monumental forces unleashed during the movement of the North American and Eurasian tectonic plates and carved out by formidable glaciers and incredible waterfalls, the land is a combination of intense natural energy and veritable calm. The topography of Iceland continues to evolve, yet many of its landscapes remain nearly unchanged since the first Viking settlers laid eyes on them more than 1,100 years ago. During your circumnavigation, see volcanic craters and fissures, watch as bubbling hot springs erupt steam into the air against a backdrop of Mars-like terrain, encounter pristine waterfalls and black lava deserts, and witness the stoic majesty of mountains capped with snow and volcanoes slumbering beneath sheets of ice. Along the coast, Iceland's characteristic fjords chronicle the powerful path of the glaciers. Enjoy these natural wonders, in constant flux as glaciers calve and shift and new mountains emerge from volcanic lava flow. A startlingly beautiful portrait of Earth's history and progress, Iceland is a primordial landscape hewn by the forces of fire and ice.
